

Engineering

In Engineering class, we...

- designed a 3-D styrofoam terrace with window holes and a compass rose
- Dilated the dimensions to accurately represent a miniature version of the terrace

We also used CAD in this process. We placed the actual drawing of the terrace on the Top Plane of the Onshape studio, constructed a border, and put walls to surround the terrace. This could help us for a number of reasons:

- Geometry Sunchaser (calculates angle of elevation using walls)
- Shows what the gardens could look like when fully constructed
- Help us visualize the actual shape of the terrace
